#### DATA WAREHOUSE EXPANSION

# Enable simple access to data

- Permit easy access from any platform or device
- Enable seamless integration and usage with reporting, analytics, and data integration tools
- Support any type of data source

#### Support client usage

- Enable creation and transfer of requested data extracts
- Permit direct use for reporting and analytics
- Enable self-service client access to the Data Warehouse

## **APIs FOR INTEROPERABILITY**

# Data Warehouse APIs built using OData (Open Data Protocol)

- Provide a flexible REST-based protocol for querying and updating data
- Provide a uniform way to describe the data and the data model for easy interoperability
- Enable using and combining data from multiple sources
- Implement interactive BI data visualization software, e.g., Power BI
  - Integrate with the Data Warehouse and the Enterprise System
  - Permit access to different data sources and direct use for reporting and analytics
  - Consider future scalability and AI integration capabilities
